Part I

ltx-talk – Overall set up

1 ltx-talk implementation

Start the DocStrip guards.

```
1 <{*class>
    Identify the internal prefix.
2 <@@=talk>
```

1.1 Set up

Identify the package and give the over all version information.

```
3 \ProvidesExplClass {ltx-talk} {2026-09-07} {0.6.2}
4 {A class for typesetting (accessible) presentations}
    Get the right type of message.
5 \prop_gput:Nnn \g_msg_module_name_prop { talk } { ltx-talk }
6 \prop_gput:Nnn \g_msg_module_type_prop { talk } { Class }
    Require the latest LATEX structures.
7 \IfFormatAtLeastF { 2026-06-01 }
8 {
9     \msg_new:nnnn { ltx-talk } { kernel-too-old }
10     { The~ltx-talk~class~requires~LaTeX~2026-06-01~or~later. }
11     {
12         You~have~tried~to~use~the~ltx-talk~class~with~a~LaTeX~kernel~release~
13         prior~to~2026-06-01;~the~required~functionality~is~missing.
14     }
15     \msg_fatal:nn { ltx-talk } { kernel-too-old }
16 }
17 \NeedsDocumentMetadata
    Warn if not an engine that is tested.
18 \bool_lazy_or:nnF

23     {
24         The~engine~"\c_sys_engine_str"~
25         is~not~supported~by~the~ltx-talk~class.
26     }
27     \msg_warning:nn { ltx-talk } { unsupported-engine }
28 }
```

1.2 Additions for expl3

Like `\vcoffin_set:Nnn`, so should be an easy enough addition.

```

29 \cs_gset_protected:Npn \vbox_set_to_wd:Nnn #1#2#3
30 {
31   \tex_setbox:D #1 \tex_vbox:D
32   {
33     \tex_hsize:D \__box_dim_eval:n {#2}
34     \color_group_begin: #3 \par \color_group_end:
35   }
36   \box_dp:N #1 \__box_dim_eval:n {#2}
37 }
38 \cs_gset_protected:Npn \vbox_set_to_wd:Nnw #1#2
39 {
40   \cs_set_protected:Npn \__box_set_to_wd:
41     { \box_wd:N #1 \__box_dim_eval:n {#2} }
42   \tex_setbox:D #1 \tex_vbox:D
43   \c_group_begin_token
44     \tex_hsize:D \__box_dim_eval:n {#2}
45     \group_insert_after:N \__box_set_to_wd:
46     \color_group_begin:
47 }

```

Some things from `xbox` that would be useful.

```

48 \cs_gset_protected:Npn \rule:nnn #1#2#3
49 {
50   \tex_vrule:D
51     height \dim_eval:n {#2} \exp_stop_f:
52     depth \dim_eval:n {#3} \exp_stop_f:
53     width \dim_eval:n {#1} \exp_stop_f:
54     \scan_stop:
55 }

```

1.3 Extra variants

```

56 \cs_generate_variant:Nn \hook_gput_code:nnn { nne }
57 \exp_args_generate:n { nVv }
58 \cs_generate_variant:Nn \dim_max:nn { v }
59 \cs_generate_variant:Nn \str_replace_all:Nnn { NnV }
60 \cs_generate_variant:Nn \vbox_to_ht:nn { v }

```

1.4 Scratch space

`\__talk_tmp:w` For one-off processing.

```

61 \cs_new_protected:Npn \__talk_tmp:w { }

```

(End of definition for `\__talk_tmp:w`.)

`\l__talk_tmp_box`

```

62 \box_new:N \l__talk_tmp_box

```

(End of definition for `\l__talk_tmp_box`.)

`\l__talk_tmp_clist`

```

63 \tl_new:N \l__talk_tmp_clist

```

(End of definition for \l__talk_tmp_clist.)

\l__talk_tmp_tl

64 \tl_new:N \l__talk_tmp_tl

(End of definition for \l__talk_tmp_tl.)

1.5 Option handling

\l__talk_aspect_ratio_str
\l__talk_fontsize_dim
\l__talk_frame_title_bool
\l__talk_mode_str
\l__talk_suppl_mode_str

```
65 \keys_define:nn { talk }
66 {
67   aspect-ratio .str_set:N =
68     \l__talk_aspect_ratio_str ,
69   font-size .dim_set:N =
70     \l__talk_fontsize_dim ,
71   frame-title-arg .bool_set:N =
72     \l__talk_frame_title_bool ,
73   handout .code:n =
74     { \str_set:Nn \l__talk_mode_str { handout } } ,
75   handout .value_forbidden:n = true ,
76   mode .choices:nn =
77     { handout , projector }
78     { \str_set_eq:NN \l__talk_mode_str \l_keys_choice_tl } ,
79   supplementary-frames .choices:nn =
80     { appendix , in-place , omit }
81     { \str_set_eq:NN \l__talk_suppl_mode_str \l_keys_choice_tl }
82 }
83 \str_new:N \l__talk_mode_str
84 \str_new:N \l__talk_suppl_mode_str
```

(End of definition for \l__talk_aspect_ratio_str and others.)

Scope for options.

```
85 \keys_define:nn { talk }
86 {
87   aspect-ratio .usage:n = load ,
88   font-size .usage:n = load ,
89   frame-title-arg .usage:n = load ,
90   mode .usage:n = load ,
91   supplementary-frames .usage:n = load
92 }
```

Compatibility keys for classical font size setting.

```
93 \clist_map_inline:nn { 10pt , 11pt , 12pt }
94 {
95   \keys_define:nn { talk }
96   {
97     #1 .meta:n = { font-size = #1 } ,
98     #1 .value_forbidden:n = true ,
99     #1 .usage:n = load
100   }
101 }
```

Initial values.

```

102 \keys_set:nn { talk }
103 {
104   aspect-ratio      = 16:9      ,
105   font-size         = 11pt      ,
106   frame-title-arg   = false     ,
107   mode              = projector ,
108   supplementary-frames = appendix
109 }
110 \ProcessKeyOptions [ talk ]

```

1.6 Setting up

Load the font size setup if available, otherwise fall back on scaling.

```

111 \file_if_exist_input:nF { size \dim_to_decimal:n \l__talk_fontsize_dim .clo }
112 {
113   \file_input:n { size10.clo }
114   \RequirePackage { relsize }
115   \hook_gput_code:nne { begindocument } { talk }
116   { \exp_not:N \relsize { \fp_eval:n { \l__talk_fontsize_dim / 10pt } } } }
117 }

```

\c__talk_paper_height_dim As geometry is being used to set the paper size with no previous value, we have to use the optional argument rather than waiting to apply \geometry.

```

118 \dim_const:Nn \c__talk_paper_height_dim { 100mm }
119 \use:e
120 {
121   \cs_set_protected:Npn \exp_not:N \__talk_tmp:w
122     #1 \tl_to_str:n { : } #2 \tl_to_str:n { : } #3 \exp_not:N \q_stop
123   {
124     \dim_const:Nn \exp_not:N \c__talk_paper_width_dim
125     {
126       \exp_not:N \fp_to_dim:n
127       { (#1 / #2) * \exp_not:N \c__talk_paper_height_dim }
128     }
129   }
130   \exp_not:N \__talk_tmp:w \l__talk_aspect_ratio_str
131   \tl_to_str:n { : } 100 \exp_not:N \q_stop
132 }
133 \use:e
134 {
135   \exp_not:N \RequirePackage
136   [
137     papersize =
138     {
139       \dim_use:N \c__talk_paper_width_dim ,
140       \dim_use:N \c__talk_paper_height_dim
141     } ,
142     tmargin    = 10mm ,
143     bmargin    = 8mm ,
144     lmargin    = 10mm ,
145     rmargin    = 10mm ,
146     headheight = 10mm ,

```

```

147         headsep    = 2mm ,
148         footskip   = 6mm
149     ]
150     { geometry }
151 }

```

(End of definition for \c__talk_paper_height_dim and \c__talk_paper_width_dim.)

Turn off justification

```

152 \raggedright

```

1.7 Math support

We always require `amsmath`: this is forced anyway by `unicode-math` for Lua_{TeX}.

```

153 \RequirePackage { amsmath }

```

1.8 Font selection

The aim here is to minimize change from the standard font setup but at the same time provide a sans-serif default. Since `beamer` was released, better sans-serif math mode fonts have become available. For OpenType engines, requiring `(lua-)unicode-math` is the most sensible approach; we also load `mathtools` as that has to be before `unicode-math`. The New Computer Modern font provides a reasonable initial set of glyphs. It comes with a wrapper package, but that does various other things: if the user wants these, they can choose to load themselves. For 8-bit engines, switching the text font to be sans-serif is easy. For math mode, the `sansmathfonts` package does a good job: here, using the package rather than adjusting directly is the sensible option.

```

154 \sys_if_engine_opentype:TF
155 {
156     \RequirePackage { fontspec }
157     \RequirePackage { mathtools }
158     \sys_if_engine luatex:TF
159     {
160         \RequirePackage { lua-unicode-math }
161         \tagpdfsetup { math / mathml / luamml / load = true }
162     }
163     { \RequirePackage { unicode-math } }
164     \setmainfont { NewCMSans10-Regular.otf }
165     \setsansfont { NewCMSans10-Regular.otf }
166     \setmathfont { NewCMSansMath-Regular.otf }
167 }
168 {
169     \RequirePackage { sansmathfonts }
170     \RequirePackage [ nomath ] { lmodern }
171     \cs_set_eq:NN \rmdefault \sfdefault
172 }

```

1.9 Text scripts

Newer kernel releases allow us to use real text sub- and superscripts: we set up the appropriate data here.

`\textsubscript@offset` Offset values as in ConT_EXt, no additional spacing added after script items.
`\textsubscript@space` 173 `\cs_set_nopar:Npn \textsubscript@offset { 0.48ex }`
`\textsuperscript@offset` 174 `\cs_set_nopar:Npn \textsubscript@space { }`
`\textsuperscript@space` 175 `\cs_set_nopar:Npn \textsuperscript@offset { 0.86ex }`
176 `\cs_set_nopar:Npn \textsuperscript@space { }`

(End of definition for `\textsubscript@offset` and others. These functions are documented on page ??.)

1.10 Hyperlinks

`\thepage` We define `\thepage` here: this is checked for by `hyperref` so has to come early.
177 `\cs_new:Npn \thepage { \@arabic \c@page }`

(End of definition for `\thepage`. This variable is documented on page ??.)
A requirement.

178 `\RequirePackage { hyperref }`
179 `\hypersetup { hidelinks }`

1.11 Tagging

We need to extend the standard tagging model to work with slides and so on.

180 `\tagpdfsetup`
181 `{`
182 `role / user-NS = ltx-talk                    ,`
183 `role / new-tag = frame / Sect                ,`
184 `role / new-tag = frametitle / H4`
185 `}`
186 `\</class>`

Part II

ltx-talk-color – Color definitions

1 ltx-talk-color implementation

Start the DocStrip guards.

```
1 < *class >
    Identify the internal prefix.
2 < @@=talk >
```

The aim here is to *test* how well l3color can support the range of color functions that are needed for a presentation. As such, this is very much experimental, but deliberately so. In particular, there is an important question about the need for global colors: used throughout beamer but otherwise not widely encountered. At the same time, there is a need to work with packages that expect color to be managed in a predictable way: pgf in particular makes use of xcolor internal as part of color management.

Currently, colors defined using xcolor will be passed on to l3color provided \DocumentMetadata is active. As that is a requirement in any case for ltx-talk, some of the setup is relatively easy to do.

1.1 Existing definitions

```
3 \RequirePackage { xcolor }

\stdcolor      Save the document commands.
\stdmathcolor  4 \NewCommandCopy \stdcolor \color
\stdtextcolor  5 \NewCommandCopy \stdmathcolor \mathcolor
               6 \NewCommandCopy \stdtextcolor \textcolor
```

(End of definition for \stdcolor, \stdmathcolor, and \stdtextcolor. These functions are documented on page ??.)

1.2 Document (and interface) commands

```
7 \cs_generate_variant:Nn \color_select:n { e }
8 \cs_generate_variant:Nn \color_select:nn { ne }
9 \cs_generate_variant:Nn \color_math:nn { e }
10 \cs_generate_variant:Nn \color_math:nnn { ne }

\color      Add the overlay specification and use l3color.
\mathcolor
\textcolor
11 \RenewDocumentCommand \color { D <> { all } o m }
12 {
13     \__talk_if_overlay:nT {#1}
14     {
15         \IfNoValueTF {#2}
16         { \color_select:e {#3} }
17         { \color_select:ne {#2} {#3} }
18     }
19     \ignorespaces
20 }
21 \RenewDocumentCommand \mathcolor { D <> { all } o m +m }
22 {
```

```

23   \__talk_if_overlay:nT {#1}
24   {
25       \IfNoValueTF {#2}
26       { \color_math:en {#3} {#4} }
27       { \color_math:nen {#2} {#3} {#4} }
28   }
29 }
30 \RenewDocumentCommand \textcolor { D <> { all } o m +m }
31 {
32     \mode_leave_vertical:
33     \group_begin:
34     \__talk_if_overlay:nT {#1}
35     {
36         \IfNoValueTF {#2}
37         { \color_select:e {#3} }
38         { \color_select:ne {#2} {#3} }
39     }
40     #4
41     \group_end:
42 }

```

(End of definition for `\color`, `\mathcolor`, and `\textcolor`. These functions are documented on page ??.)

`\pagecolor` Here, the definition is different: we directly use the shipout hook.
`\__talk_pagecolor:n`

```

43 \RenewDocumentCommand \pagecolor { D <> { all } o m }
44 {
45     \__talk_if_overlay:nT {#1}
46     {
47         \IfNoValueTF {#2}
48         { \__talk_pagecolor:n { {#3} } }
49         { \__talk_pagecolor:n { [ {#2} ] {#3} } }
50     }
51 }
52 \cs_new_protected:Npn \__talk_pagecolor:n #1
53 {
54     \AddToHook { shipout / background }
55     {
56         \color #1
57         \put ( 0cm, -\paperheight )
58         { \rule { \paperwidth } { \paperheight } }
59     }
60 }

```

(End of definition for `\pagecolor` and `\__talk_pagecolor:n`. This function is documented on page ??.)

`\stdset@color`
`\stdreset@color`

```

61 \cs_set_eq:NN \stdset@color \set@color
62 \cs_set_eq:NN \stdreset@color \reset@color

```

(End of definition for `\stdset@color` and `\stdreset@color`. These functions are documented on page ??.)

`\set@color` Part of code-level interface for color: simply use the expl3 version of the same idea.
`\reset@color`

```

63 \cs_set_eq:NN \set@color \color_ensure_current:
64 \cs_set_eq:NN \reset@color \__color_backend_reset:

```

(End of definition for \set@color and \reset@color. These functions are documented on page ??.)

1.3 Color definition

\DeclareColor Provide a single interface here: as the data will be passed to l3color in any case, there is not too much to do.

```
65 \NewDocumentCommand \DeclareColor { m o m }
66 {
67   \IfNoValueTF {#2}
68     { \colorlet {#1} {#3} }
69     { \definecolor {#1} {#2} {#3} }
70 }
```

(End of definition for \DeclareColor. This function is documented on page ??.)

1.4 Semantic colors

Pick up the standard colors from beamer.

```
71 \DeclareColor { alert } [ RGB ] { 200 , 0 , 0 }
72 \DeclareColor { example } { green!50!black }
73 \DeclareColor { structure } [ rgb ] { 0.2 , 0.2 , 0.7 }
74 \</class>
```

Part III

ltx-talk-decode – Decoding overlay specs

1 ltx-talk-decode implementation

Start the DocStrip guards.

```
1 <{*class}>
    Identify the internal prefix.
2 <{@=talk}>
```

`\l__talk_decode_overlays_bool` The result from decoding: are we on the current slide. This may well be better handled by moving to a TF signature: to be explored.

```
3 \bool_new:N \l__talk_decode_overlays_bool
```

(End of definition for \l__talk_decode_overlays_bool.)

`\l__talk_decode_trailing_bool` Indicates the current slide trailing after all of those in the overlay specification: needed for `\temporal`.

```
4 \bool_new:N \l__talk_decode_trailing_bool
```

(End of definition for \l__talk_decode_trailing_bool.)

`\g__talk_pauses_int` The automatically-incremented value for the relative overlay value.

```
\c@pauses 5 \int_new:N \g__talk_pauses_int
\thepauses 6 \cs_new_eq:NN \c@pauses \g__talk_pauses_int
7 \cs_new:Npn \thepauses { \@arabic \g__talk_pauses_int }
```

(End of definition for \g__talk_pauses_int, \c@pauses, and \thepauses. These variables are documented on page ??.)

`\l__talk_decode_modes_bool` Tracks whether at least one mode was given with no overlays: this means that the specification selects only included modes.

```
8 \bool_new:N \l__talk_decode_modes_bool
```

(End of definition for \l__talk_decode_modes_bool.)

`\l__talk_decode_step_bool` Tracks whether to step `\g__talk_pauses_int`.

```
9 \bool_new:N \l__talk_decode_step_bool
```

(End of definition for \l__talk_decode_step_bool.)

`\l__talk_decode_arg_str` For error usage.

```
10 \str_new:N \l__talk_decode_arg_str
```

(End of definition for \l__talk_decode_arg_str.)

`\l__talk_decode_overlays_clist` The decoded overlay specification: will have only absolute slide numbers present, poten-

`\l__talk_decode_overlays_str` tially along with ranges.

```
11 \clist_new:N \l__talk_decode_overlays_clist
```

```
12 \str_new:N \l__talk_decode_overlays_str
```

(End of definition for \l__talk_decode_overlays_clist and \l__talk_decode_overlays_str.)

\l__talk_decode_action_str The action which is active, if any.

13 \str_new:N \l__talk_decode_action_str

(End of definition for \l__talk_decode_action_str.)

\l__talk_decode_actions_bool For the actions versions of overlay tracking.

\l__talk_decode_actions_clist 14 \bool_new:N \l__talk_decode_actions_bool

\l__talk_decode_actions_str 15 \clist_new:N \l__talk_decode_actions_clist

16 \str_new:N \l__talk_decode_actions_str

(End of definition for \l__talk_decode_actions_bool, \l__talk_decode_actions_clist, and \l__talk_decode_actions_str.)

__talk_decode_parse:n First a simple check for an entirely blank argument: if that's the case, there is no additional overlay to consider. Then deal with any category code issues before looping over blocks divided by | tokens.

__talk_decode_parse_auxi:n
__talk_decode_parse_auxii:n
__talk_decode_parse:w

```

17 \cs_new_protected:Npn __talk_decode_parse:n #1
18 { \exp_args:Ne __talk_decode_parse_auxi:n {#1} }
19 \cs_new_protected:Npn __talk_decode_parse_auxi:n #1

198   { \__talk_decode_overlay_offset:nNnN {#1} #2 {#3#4} }
199 }

```

Overlay values can never be negative: this is enforced here.

```

200 \cs_new_protected:Npn \__talk_decode_overlay_offset:nNn #1#2#3
201 {
202   \str_put_right:ce { l__talk_decode_ #1 _str }
203   { \int_max:nn { 0 } { #3 + \g__talk_pauses_int + #2 } }
204   \__talk_decode_overlays:nN {#1}
205 }

```

(End of definition for `\__talk_decode_overlays:n` and others. This function is documented on page ??.)

```

\__talk_decode_check:n
\__talk_decode_check:nw
  \__talk_decode_check_single:nn
  \__talk_decode_check_range:nnn

```

At this stage we have a fully “written out” overlay specification, and need to work out if the current slide is included. We need to look at each entry in the comma-separated list to sort this out. First we filter out the case of a `*`, then it’s a question of working out whether each entry is a single number or a range, and if the latter, whether it’s open at either the start or the end.

```

206 \cs_new_protected:Npn \__talk_decode_check:n #1
207 {
208   \clist_if_empty:cF { l__talk_decode_ #1 _clist }
209   {
210     \msg_error:nnV { talk } { bad-action-spec }
211     \l__talk_decode_arg_str
212   }
213   \clist_set:cv { l__talk_decode_ #1 _clist } { l__talk_decode_ #1 _str }
214   \clist_if_in:cnTF { l__talk_decode_ #1 _clist } { * }
215   { \bool_set_true:c { l__talk_decode_ #1 _bool } }
216   {
217     \clist_map_inline:cn { l__talk_decode_ #1 _clist }

```

```

218         { \__talk_decode_check:nw {#1} 0 ##1 - - \q_stop }
219     }
220 }

```

If #4 is empty, both of the “filler” - tokens were consumed: we have a single value. Otherwise there is a range: the setup above ensures that there will be a starting value in all cases due to the leading 0, but there may not be an end one.

Part IV

ltx-talk-frame – The structure of frames

1 ltx-talk-frame implementation

Start the DocStrip guards.

```
1 <{*class}>
    Identify the internal prefix.
2 <@@=talk>
```

1.1 Slides in frames

Currently, each slide in a frame will produce a separate page in the output (unless the slide is suppressed entirely). Material is then hidden on some pages by using opacity. An alternative approach would be to use Optional Content Groups to have a similar effect on one page per frame. However, whilst that would be relatively clear for appear/disappear effects, it would be much less straight-forward for partial transparency, *etc.*, plus would depend more heavily on viewer support. At a future stage we may wish to revisit this.

```
\g__talk_slide_continue_bool
\l__talk_slide_continue_bool
Tracks whether the frame continues after the current slide.
3 \bool_new:N \g__talk_slide_continue_bool
4 \bool_new:N \l__talk_slide_continue_bool

(End of definition for \g__talk_slide_continue_bool and \l__talk_slide_continue_bool.)

\g__talk_break_box
\l__talk_slide_box
5 \box_new:N \g__talk_break_box
6 \box_new:N \l__talk_break_box

(End of definition for \g__talk_break_box and \l__talk_slide_box.)

\l__talk_slide_box
7 \box_new:N \l__talk_slide_box

(End of definition for \l__talk_slide_box.)

\g__talk_slide_int
\c@slide
\theslide
The slide number inside the current frame: needed to know which overlays are active.
We also provide LATEX counter-style access.
8 \int_new:N \g__talk_slide_int
9 \cs_new_eq:NN \c@slide \g__talk_slide_int
10 \cs_new:Npn \theslide { \@arabic \c@slide }

(End of definition for \g__talk_slide_int, \c@slide, and \theslide. These variables are documented
on page ??.)

Required to know which is the last slide in a frame for tagging.
11 \property_new:nnnn { slides } { now } { 1 } { \int_use:N \g__talk_slide_int }
```

`\\_talk_slide:nn`
`\\_talk_slide_auxi:nn`
`\\_talk_slide_auxii:n`
`\\_talk_slide_auxiii:`
`\\_talk_slide_auxiv:n`

Each slide is parsed inside simple set up, the only complexity being if we are handling fragile frames. There, all `\obeyedline` in the grabbed tokens need to be turned back into `^~M` before rescanning: this ensures that any verbatim grabbing in the frame still works. The strange business with setting the continuation boolean is needed as otherwise we get an infinite loop if there is an overlay specification for the frame itself. Tagging should not of itself force slide continuation, so the global boolean is reset for the tagged slide.

```

12 \cs_new_protected:Npn \\_talk_slide:nn #1#2
13 {
14   \group_begin:
15     \tl_set:Nx \l__talk_tmp_tl
16     {
17       \property_ref:ee { frame . \int_use:N \g__talk_frame_int }
18       { slides }
19     }

24     \l__talk_tmp_tl
25     \str_replace_all:NnV \l__talk_frame_tagging_str { ,~n }
26     \l__talk_tmp_tl
27   }
28   \int_gzero:N \g__talk_slide_int
29   \RenewCommandCopy \frame \\_talk_latex_frame:n
30   \bool_do_while:Nn \g__talk_slide_continue_bool
31   { \\_talk_slide_auxi:nn {#1} {#2} }
32   \group_end:
33 }
34 \cs_new_protected:Npn \\_talk_slide_auxi:nn #1#2
35 {
36   \int_gincr:N \g__talk_slide_int
37   \bool_gset_false:N \g__talk_slide_continue_bool
38   \\_talk_if_overlay:nT {#1}
39   { \\_talk_slide_auxii:n {#2} }
40 }

```

The business end of the slide starts in vertical mode, and opens the surrounding vertical box. Immediately inside is a horizontal box which will contain any tagging-related what-sits. Once that is done, back to vertical mode for the user content. The use of `:Nw` rather than `:n` boxes here is to allow the the split of the functions into “before” and “after” the content is typeset.

```

41 \cs_new_protected:Npn \\_talk_slide_auxii:n #1

```

(End of definition for `\__talk_slide_tag_off_begin:` and `\__talk_slide_tag_off_end:`.)

`\g__talk_frame_struct_int` The tagging structure number for the slide: needed by the content placed outside of the current box (for example the frame title).

```
187 \int_new:N \g__talk_frame_struct_int
```

(End of definition for `\g__talk_frame_struct_int`.)

1.2 Counters

`\g__talk_cnt_reset_seq` As `\stepcounter`, *etc.*, will increment at each overlay, there is a need to save and reset. The list will be finalized at the end of the preamble, so the data storage is created at that point. The starting point is counters created before the class is loaded (other than those for lists, which reset “naturally”). Other cases are handled by adding to `\newcounter`.

```
188 \seq_new:N \g__talk_cnt_reset_seq
189 \seq_gset_from_clist:Nn \g__talk_cnt_reset_seq
190 {
191   equation      ,
192   footnote      ,
193   mpfootnote    ,
194   parentequation
195 }
196 \seq_map_inline:Nn \g__talk_cnt_reset_seq
197 {
198   \int_new:c { g__talk_saved_ #1 _int }
199   \int_gset_eq:cc { g__talk_saved_ #1 _int } { c@ #1 }
200 }
```

(End of definition for `\g__talk_cnt_reset_seq`.)

`\__talk_cnt_save:` A simple save-and-restore pair.

```
\__talk_cnt_restore: 201 \cs_new_protected:Npn \__talk_cnt_save:
202 {
203   \seq_map_inline:Nn \g__talk_cnt_reset_seq
204   { \int_gset_eq:cc { g__talk_saved_ ##1 _int } { c@ ##1 } }
205 }
206 \cs_new_protected:Npn \__talk_cnt_restore:
207 {
208   \seq_map_inline:Nn \g__talk_cnt_reset_seq
209   { \int_gset_eq:cc { c@ ##1 } { g__talk_saved_ ##1 _int } }
210 }
```

(End of definition for `\__talk_cnt_save:` and `\__talk_cnt_restore:`.)

`\@definecounter` Track all counters for resetting.

```
\std@definecounter 211 \cs_new_eq:NN \std@definecounter \@definecounter
212 \cs_gset_protected:Npn \@definecounter #1
213 {

415 }

```

(End of definition for \l__talk_footer_bg_tl and others.)

__talk_metadata_name:n A simple auxiliary to shorten metadata names if appropriate. Full expansion is applied as this avoids any issue with stored names.

```

416 \cs_new:Npn \__talk_metadata_name:n #1
417 {
418     \tl_if_exist:cTF { @ short #1 }
419     { short #1 }
420     {#1}
421 }

```

(End of definition for __talk_metadata_name:n.)

__talk_wallpaper_hrule:Nnn A simple abstraction for the top and bottom rules on the page.

```

422 \cs_new_protected:Npn \__talk_wallpaper_hrule:Nnn #1#2#3
423 {
424     \skip_horizontal:n { -\Gm@lmargin }
425     \tl_if_empty:NF #1
426     {
427         \group_begin:
428         \color_select:V #1
429         \rule:nnn { \paperwidth } {#2} {#3}
430         \skip_horizontal:n { -\paperwidth }
431         \group_end:
432     }
433 }

```

(End of definition for __talk_wallpaper_hrule:Nnn.)

\ps@plain Install a standard header and footer template, and redefine the **plain** one as this will be used for frames without “wallpaper” which still need core links, *etc.* We also provide a version that only shows the visual elements: this is deliberately using the same settings as the main templates.

```

434 \cs_set_nopar:Npn \ps@plain
435 {
436     \cs_set_nopar:Npn \@oddhead
437     {
438         \hfil
439     }

```

```

440 \cs_set_nopar:Npn \@oddfoot { }
441 \cs_set_eq:NN \@evenhead \@oddhead
442 \cs_set_eq:NN \@evenfoot \@oddfoot
443 }
444 \cs_set_nopar:Npn \ps@wallpaper
445 {
446 \cs_set_nopar:Npn \@oddhead
447 {
448 \UseInstance { header } { wallpaper }
449 \hfil
450 }
451 \cs_set_nopar:Npn \@oddfoot
452 {
453 \UseInstance { footer } { wallpaper }
454 \hfil
455 }
456 \cs_set_eq:NN \@evenhead \@oddhead
457 \cs_set_eq:NN \@evenfoot \@oddfoot
458 }
459 \cs_new_nopar:Npn \ps@talk
460 {

462 {
463 \UseInstance { header } { std }
464 \hfil
465 }
466 \cs_set_nopar:Npn \@oddfoot { \UseInstance { footer } { std } }
467 \cs_set_eq:NN \@evenhead \@oddhead
468 \cs_set_eq:NN \@evenfoot \@oddfoot
469 }
470 \pagestyle { talk }

```

(End of definition for \ps@plain, \ps@wallpaper, and \ps@talk. These functions are documented on page ??.)

1.6 The frame environment

\l__talk_frame_bool	To track whether we are inside a frame or not.
471 \bool_new:N \l__talk_frame_bool	
	<i>(End of definition for \l__talk_frame_bool.)</i>
\g__talk_frame_suppl_int	Used to track saved supplementary frames.
472 \int_new:N \g__talk_frame_suppl_int	
	<i>(End of definition for \g__talk_frame_suppl_int.)</i>
\g__talk_frame_tag_bool	To track when a frame is being tagged: mainly needed for the header (and as a result global).
473 \bool_new:N \g__talk_frame_tag_bool	
	<i>(End of definition for \g__talk_frame_tag_bool.)</i>
\l__talk_frame_verb_bool	Indicates that material was collected verbatim (and thus needs rescanning).
474 \bool_new:N \l__talk_frame_verb_bool	

(End of definition for \l__talk_frame_verb_bool.)

\g__talk_frame_int The overall frame number, including L^AT_EX counter-like access.

```

\c@frame 475 \int_new:N \g__talk_frame_int
\theframe 476 \cs_new_eq:NN \c@frame \g__talk_frame_int
\@framenum 477 \cs_new:Npn \theframe { \@arabic \c@frame }
478 \cs_new:Npn \@framenum { \arabic { frame } }

```

(End of definition for \g__talk_frame_int and others. These variables are documented on page ??.)

\g__talk_appendixframe_int The overall frame number, including L^AT_EX counter-like access.

```

\c@appendixframe 479 \int_new:N \g__talk_appendixframe_int
\theappendixframe 480 \cs_new_eq:NN \c@appendixframe \g__talk_appendixframe_int
\@appendixframenum 481 \cs_new:Npn \theappendixframe { \@arabic \c@appendixframe }
482 \cs_new:Npn \@appendixframenum { \arabic { appendixframe } }

```

(End of definition for \g__talk_appendixframe_int and others. These variables are documented on page ??.)

\@frames The total frames can be handled using the kernel properties.

```

483 \property_new:nnnn { frames } { shipout } { -1 }
484 { \int_eval:n { \g__talk_frame_int - \g__talk_appendixframe_int } }
485 \cs_new:Npn \@frames { \property_ref:nn { lastpage } { frames } }

```

(End of definition for \@frames. This variable is documented on page ??.)

\@totalframes The total frames can be handled using the kernel properties.

```

486 \property_new:nnnn { totalframes } { shipout } { -1 }
487 { \int_use:N \g__talk_frame_int }
488 \cs_new:Npn \@totalframes { \property_ref:nn { lastpage } { totalframes } }

```

(End of definition for \@totalframes. This variable is documented on page ??.)

\@appendixframes The total frames can be handled using the kernel properties.

```

489 \property_new:nnnn { appendixframes } { shipout } { -1 }
490 { \int_use:N \g__talk_appendixframe_int }
491 \cs_new:Npn \@appendixframes { \property_ref:nn { lastpage } { appendixframes } }

```

(End of definition for \@appendixframes. This variable is documented on page ??.)

\l_talk_frame_properties_clist Currently somewhat experimental: not used by us, but helpful for users.

```

492 \clist_new:N \l_talk_frame_properties_clist

```

(End of definition for \l_talk_frame_properties_clist. This variable is documented on page ??.)

```

```

Part V

ltx-talk-frame – The structure of frames

1 ltx-talk-frame-structure implementation

Start the DocStrip guards.

```
1 < *class >
    Identify the internal prefix.
2 < @@=talk >
```

1.1 Columns

```
3 \keys_define:nn { talk }
4   { columns .inherit:n = talk / column }
```

`\l__talk_columns_wd_tl` We store the requested width for columns in a `tl` as this means that the key value will make sense even if it depends on the current `\textwidth`.

```
5 \keys_define:nn { talk / columns }
6   { width .tl_set:N = \l__talk_columns_wd_tl }
7 \keys_set:nn { talk / columns }
8   { width = \textwidth }
```

(End of definition for `\l__talk_columns_wd_tl`.)

`\l__talk_column_int` For tracking which column we are in, and allowing for nesting.

```
\g__talk_column_int
9 \int_new:N \l__talk_column_int
10 \int_new:N \g__talk_column_int
```

(End of definition for `\l__talk_column_int` and `\g__talk_column_int`.)

`columns (env.)` Columns are block-like environments so we start and end with a `\par` to ensure correct tagging.

```
11 \NewDocumentEnvironment { columns } { D <> { all } 0 { } }
12   {
13     \__talk_action_begin:n {#1}
14     \par
15     \int_set_eq:NN \l__talk_column_int \g__talk_column_int
16     \int_gzero:N \g__talk_column_int
17     \keys_set:nn { talk / columns } {#2}
18     \hbox_set_to_wd:Nnw \l__talk_tmp_box { \l__talk_columns_wd_tl }
19     \dim_set:Nn \textwidth { \l__talk_columns_wd_tl }
20     \dim_set_eq:NN \columnwidth \textwidth
21     \ignorespaces
22   }
23   {
24     \unskip
25     \hbox_set_end:
26     \box_use_drop:N \l__talk_tmp_box
27     \int_gset_eq:NN \g__talk_column_int \l__talk_column_int
```

```

28   \par
29   \__talk_action_end:
30 }

```

\l__talk_column_alignment_tl

```

31 \keys_define:nn { talk / column }
32 {
33   b .meta:n =
34     { vertical-alignment = bottom } ,
35   b .value_forbidden:n = true ,
36   c .meta:n =
37     { vertical-alignment = center } ,
38   c .value_forbidden:n = true ,
39   t .meta:n =
40     { vertical-alignment = top } ,
41   t .value_forbidden:n = true ,
42   vertical-alignment .choices:nn =
43     { bottom , center , top }
44     {
45       \tl_set_eq:NN \l__talk_column_alignment_tl
46       \l_keys_value_tl
47     }
48 }
49 \tl_new:N \l__talk_column_alignment_tl
50 \keys_set:nn { talk / column }
51 {
52   vertical-alignment = center
53 }

```

(End of definition for \l__talk_column_alignment_tl.)

__talk_column_align_bottom:n
 __talk_column_align_center:n
 __talk_column_align_top:n

Most of this will appear in the kernel in due course.

```

54 \cs_new_protected:Npn \__talk_column_align_bottom:n #1
55 { \vbox:n {#1} }
56 \cs_new_protected:Npn \__talk_column_align_center:n #1
57 {
58   \check@mathfonts
59   \vbox_set:Nn \l__talk_tmp_box {#1}
60   \box_set_ht:Nn \l__talk_tmp_box
61   {
62     0.5 \box_ht:N \l__talk_tmp_box
63     + 0.5 \box_dp:N \l__talk_tmp_box
64     + ( \l__talk_vcenter_offset_tl )
65   }
66   \box_set_dp:Nn \l__talk_tmp_box
67   {
68     \box_ht:N \l__talk_tmp_box
69     - ( \l__talk_vcenter_offset_tl ) * 2
70   }
71   \box_use_drop:N \l__talk_tmp_box
72 }
73 \cs_new_protected:Npn \__talk_column_align_top:n #1
74 { \vbox_top:n {#1} }

```

(End of definition for `\__talk_column_align_bottom:n`, `\__talk_column_align_center:n`, and `\__talk_column_align_top:n`.)

`\l__talk_vcenter_offset_tl` Vertical offset based on text mode values: done as a variable `tl` so that a reset to math mode parameters is possible.

```

75 \tl_new:N \l__talk_vcenter_offset_tl
76 \tl_set:Nn \l__talk_vcenter_offset_tl
77   { ( \fontcharht \font `\< - \fontchardp \font `\) ) / 2 }

```

(End of definition for `\l__talk_vcenter_offset_tl`.)

`column (env.)` A cut-down version of a minipage: we want to be clear on the semantic meaning. the action is applied inside the box after starting horizontal mode to avoid spacing issues when switching whatsits in and out.

```

78 \NewDocumentEnvironment { column } { D <> { all } 0 { } m }
79   {
80     \par
81     \int_gincr:N \g__talk_column_int
82     \int_compare:nNnF \g__talk_column_int = 1
83       { \hfil }
84     \keys_set:nn { talk / column } {#2}
85     \vbox_set_to_wd:Nnw \l__talk_tmp_box {#3}
86     \dim_set:Nn \textwidth {#3}
87     \dim_set_eq:NN \columnwidth \textwidth
88     \@parboxrestore
89     \leavevmode
90     \raggedright
91     \__talk_action_begin:n {#1}
92     \ignorespaces
93   }

```

The `\@ignore` here means that any spaces after `\end{column}` are suppressed by a `\ignorespaces` inserted by the kernel. The `\par` before `\__talk_action_end:` is needed as the group formed for actions would otherwise trap for example alignment changes.

```

94   {
95     \par
96     \__talk_action_end:
97     \vbox_set_end:
98     \use:c { __talk_column_align_ \l__talk_column_alignment_tl :n }
99     { \vbox_unpack_drop:N \l__talk_tmp_box }
100    \par
101    \@ignoretrue
102  }

```

1.2 Floats

Well really “not floats at all” but the idea is clear.

`\l__talk_float_alignment_tl` We only worry about horizontal alignment here.

```

103 \tl_new:N \l__talk_float_alignment_tl

```

(End of definition for \l__talk_float_alignment_tl.)

A bit similar to the current approach to lists: we need a template at the start but a common function at the end. The `float-placement` key is at present just there to allow mopping up of any argument that is given by accident, hence maps to a temporary variable.

```

104 \NewTemplateType { floatenv } { 2 }
105 \DeclareTemplateInterface { floatenv } { talk } { 2 }
106 {
107   float-placement : tokenlist ,
108   horizontal-alignment : choice { left , center , right } = left
109 }
110 \DeclareTemplateCode { floatenv } { talk } { 2 }
111 {
112   float-placement = \l__talk_tmp_tl ,
113   horizontal-alignment =
114   {
115     left = \tl_set:Nn \l__talk_float_alignment_tl { flushleft } ,
116     center = \tl_set:Nn \l__talk_float_alignment_tl { center } ,
117     right = \tl_set:Nn \l__talk_float_alignment_tl { flushright }
118   }
119 }

```

The use of `\@skiphyperreftrue` here is needed as we do not want targets creating for “floats”. We may need a better interface for this: the switch is essentially internal. The structure role shuffle is needed so that the entire unit is treated as a `Float` for tagging, but we do not lose other information.

```

120 {
121   \SetTemplateKeys { floatenv } { talk } {#1}
122   \begin { minipage } { \columnwidth }
123     \use:e
124     {
125       \AssignStructureRole { para / semantic } { float }
126       \begin { \l__talk_float_alignment_tl }
127       \AssignStructureRole { para / semantic }
128       { \UseStructureName { para / semantic } }
129     }
130     \cs_set_nopar:Npn \@capttype {#2}
131     \@skiphyperreftrue
132   }
133 \DeclareInstance { floatenv } { std } { talk } { horizontal-alignment = left }

```

`\endfloatenv` And the common end function.

```

134 \cs_new_protected:Npn \endfloatenv
135 {
136   \exp_args:Ne \end { \l__talk_float_alignment_tl }
137   \end { minipage }
138 }

```

(End of definition for `\endfloatenv`. This function is documented on page ??.)

figure (*env.*) Unlike beamer, we allow for overlays for the environments as a whole.

```

table (env.)
139 \clist_map_inline:nn { figure , table }
140 {
141   \NewDocumentEnvironment {#1} { D <> { all } = { float-placement } 0 { } }

```

```

142     {
143       \__talk_action_begin:n {##1}
144       \UseInstance { floatenv } { std } {##2} {#1}
145     }
146     {
147       \endfloatenv
148       \__talk_action_end:
149     }

```

`\c@figure` The standard variables needed to make captions work (nothing for list of floats, as at present those are not offered). For the “number”, we currently only show the name: “floats” in presentations really should not be numbered.

```

\thetable 150 \newcounter {#1}
\figurename 151 \tl_new:c { #1 name }
\tableename 152 \tl_set:ce { #1 name } { \text_titlecase_first:n {#1} }
\fnum@figure 153 \tl_new:c { fnum@ #1 }
\fnum@table 154 \tl_set:eq:cc { fnum@ #1 } { #1 name }
155 }

```

(End of definition for \c@figure and others. These variables are documented on page ??.)

The spacing values needed for the standard function.

```

156 \newlength \abovecaptionskip
157 \newlength \belowcaptionskip
158 \setlength \abovecaptionskip { 7pt }
159 \setlength \belowcaptionskip { 7pt }

```

`\@caption` This is a copy of the kernel version of the function, but with writing to the list of whatever file removed. It is very likely this needs to be reworked as a template, but that will likely come from the kernel.

```

160 \cs_set_protected:Npn \@caption #1 [ #2 ] #3
161 {
162   \par
163   \begingroup
164     \@parboxrestore
165     \if@minipage \@setminipage \fi
166     \normalsize
167     \@makecaption { \csname fnum@ #1 \endcsname } { \ignorespaces #3 }
168   \par
169   \endgroup
170 }

```

(End of definition for \@caption. This function is documented on page ??.)

1.3 Footnotes

`\g__talk_footnote_box` Holds footnotes as they are constructed.

```

171 \box_new:N \g__talk_footnote_box

```

(End of definition for \g__talk_footnote_box.)

`\g__talk_footnote_overlay_seq` For tracking the overlays to apply.

```

172 \seq_new:N \g__talk_footnote_overlay_seq

```

(End of definition for \g__talk_footnote_overlay_seq.)

\stdfootnote

```
173 \NewCommandCopy \stdfootnote \footnote
```

(End of definition for \stdfootnote. This function is documented on page ??.)

\footnote Sort-of overlay aware!

```
174 \RenewDocumentCommand \footnote { D <> { all } o +m }
175 {
176   \seq_gpush:Nn \g__talk_footnote_overlay_seq {#1}
177   \IfNoValueTF {#2}
178     { \stdfootnote {#3} }
179     { \stdfootnote [ {#2} ] {#3} }
180 }
```

(End of definition for \footnote. This function is documented on page ??.)

This socket receives all of the footnote content: in the standard setup it would be an insert. Hence this is the best place to grab the entire content. Notice that the footnote rule is only inserted when the box is used, if it turns out it's needed. The overlay code is added here as it needs to be inside the box used to collect the footnotes but around all of the content: currently there's not a "tighter" place to target.

```
181 \NewSocketPlug { fntext / process } { talk }
182 {
183   \vbox_gset:Nn \g__talk_footnote_box
184   {
185     \vbox_unpack:N \g__talk_footnote_box
186     \seq_gpop_left:NN \g__talk_footnote_overlay_seq
187     \l__talk_tmp_tl
188     \exp_args:NV \__talk_decode_parse:n \l__talk_tmp_tl
189     \__talk_action_uncover:N \l__talk_decode_overlays_bool
190     #1
191     \__talk_action_uncover_end:N \l__talk_decode_overlays_bool
192   }
193 }
194 \AssignSocketPlug { fntext / process } { talk }
```

\@makefntext Use a copy of the standard setup.

```
195 \cs_new_eq:NN \@makefntext \fnote_makefntext:n
```

(End of definition for \@makefntext. This function is documented on page ??.)

```
196 \</class>
```

Part VI

ltx-talk-mode – Modes

1 ltx-talk-mode implementation

Start the DocStrip guards.

```
1 <*class>
    Identify the internal prefix.
2 <@@=talk>
```

`\__talk_mode:nT` A simplified version of `\mode`: only deal with the argument form, only check the entire overlay spec as a string.

```
3 \prg_new_protected_conditional:Npnn \__talk_mode:n #1 { T }
4 {
5     \bool_lazy_or:nnTF
6     { \str_if_eq_p:nn {#1} { all } }
7     { \str_if_eq_p:Vn \l__talk_mode_str {#1} }
8     \prg_return_true:
9     \prg_return_false:
10 }
```

(End of definition for __talk_mode:nT.)

`\mode`

```
11 \NewDocumentCommand \mode { D <> { all } +m }
12 { \__talk_mode:nT {#1} {#2} }
```

(End of definition for \mode. This function is documented on page ??.)

```
13 </class>
```

Part VII

ltx-talk-overlay — Overlays

1 ltx-talk-overlay implementation

Start the DocStrip guards.

```
1 <{*class>
    Identify the internal prefix.
2 <{@=talk>
```

1.1 Utilities

```
__talk_if_overlay:nTF
__talk_if_overlay:VTF
__talk_overlay_arg:n
3 \prg_new_protected_conditional:Npnn __talk_if_overlay:n #1 { T , F , TF }
4 {
5   __talk_decode_parse:n {#1}
6   \bool_if:NTF \l__talk_decode_overlays_bool
7   \prg_return_true:
8   \prg_return_false:
9 }
10 \prg_generate_conditional_variant:Nnn __talk_if_overlay:n { V } { T , F , TF }
```

A macro processor variant of the check that always results in an N-type bool.

```
11 \cs_new_protected:Npn __talk_overlay_arg:n #1
12 {
13   __talk_if_overlay:nTF {#1}
14   { \cs_set:Npn \ProcessedArgument { \c_true_bool } }
15   { \cs_set:Npn \ProcessedArgument { \c_false_bool } }
16 }
```

(End of definition for __talk_if_overlay:nTF and __talk_overlay_arg:n.)

\l__talk_shuffle_skip For tracking.

```
17 \skip_new:N \l__talk_shuffle_skip
```

(End of definition for \l__talk_shuffle_skip.)

__talk_shuffle_skip:n As opacity uses whatsits at present, we need to make sure that any spaces come *after* them. This is done by “shuffling” the last skip past the opacity.

```
18 \cs_new_protected:Npn __talk_shuffle_skip:n #1
19 {
20   \skip_set_eq:NN \l__talk_shuffle_skip \tex_lastskip:D
21   \bool_lazy_and:nnTF
22   { ! \skip_if_eq_p:nn \l__talk_shuffle_skip { Opt } }
23   {
24     \bool_lazy_or_p:nn
25     { \mode_if_horizontal_p: }
26     { \mode_if_vertical_p: }
27   }
28   {
29     \tex_unskip:D
```

```

30         #1
31         \mode_if_horizontal:TF
32         { \skip_horizontal:n }
33         { \skip_vertical:n }
34         \l__talk_shuffle_skip
35     }
36     {#1}
37 }

```

(End of definition for __talk_shuffle_skip:n.)

1.2 Opacity utilities

Currently, opacity is applied using whatsits at a low level. That means that to preserve spacing, we need to insert no-op versions in various places. To do that and get correct overlays, we need to track the current opacity. At present, this seems very ltx-talk-specific, so is handled here with a few auxiliaries.

```

\__talk_opacity_begin:n
\__talk_opacity_end:
38 \cs_new_protected:Npn \__talk_opacity_begin:n #1
39 { \__talk_shuffle_skip:n { \opacity_begin:n {#1} } }
40 \cs_new_protected:Npn \__talk_opacity_end:
41 { \__talk_shuffle_skip:n { \opacity_end: } }

```

(End of definition for __talk_opacity_begin:n and __talk_opacity_end:.)

1.3 Action commands and environments

Commands that can be used as actions all have a common form (with one exception). The common internal structure is used to enable them to be used as actions by looking for the name __talk_action_⟨name⟩:N.

```

\__talk_action_alert:N
42 \cs_new_protected:Npn \__talk_action_alert:N #1
43 {
44     \bool_if:NTF #1
45     { \color_select:n { alert } }
46     { \color_select:n { . } }
47 }

```

(End of definition for __talk_action_alert:N.)

```

\__talk_action_invisible:N
\__talk_action_invisible_end:N
\__talk_action_visible:N
\__talk_action_visible_end:N
48 \cs_new_protected:Npn \__talk_action_invisible:N #1
49 {
50     \bool_if:NTF #1
51     { \__talk_opacity_begin:n { 0 } }
52     { \__talk_opacity_begin:n { 1 } }
53 }
54 \cs_new_protected:Npn \__talk_action_invisible_end:N #1
55 { \__talk_opacity_end: }
56 \cs_new_protected:Npn \__talk_action_visible:N #1
57 {
58     \bool_if:NTF #1

```

```

59     { \_talk_opacity_begin:n { 1 } }
60     { \_talk_opacity_begin:n { 0 } }
61   }
62 \cs_new_protected:Npn \_talk_action_visible_end:N #1
63   { \_talk_opacity_end: }

```

(End of definition for _talk_action_invisible:N and others.)

```

\_talk_action_only:N
\_talk_action_only_end:N
\_talk_saved_ifendpe:

```

Here, we simply throw away the content we do not want: this is done by typesetting in a disposable box. As box setting rather than insertion creates tag structures, they may need to be suspended. To avoid issues with whatsits, we have a surrounding horizontal box if required. Suspending tagging does not turn off or save/restore the @endpe mechanism, so we need to do this ourselves. This avoids issues with paragraph tagging if the mechanism would otherwise be active.

```

64 \cs_new_protected:Npn \_talk_action_only:N #1
65   {
66     \bool_if:NF #1
67     {
68       \bool_if:NT \g__talk_frame_tag_bool
69       {
70         \cs_set_eq:NN \_talk_saved_ifendpe: \if@endpe
71         \vbox_set:Nw \l__talk_tmp_box
72         \hbox_set:Nw \l__talk_tmp_box
73         \tag_suspend:n { onlyenv }
74       }
75       \vbox_set:Nw \l__talk_tmp_box
76     }
77   }
78 \cs_new_protected:Npn \_talk_action_only_end:N #1
79   {
80     \bool_if:NF #1
81     {
82       \vbox_set_end:
83       \bool_if:NT \g__talk_frame_tag_bool
84       {
85         \tag_resume:n { onlyenv }
86         \hbox_set_end:
87         \vbox_set_end:
88         \cs_gset_eq:NN \if@endpe \_talk_saved_ifendpe:
89       }
90     }
91   }
92 \cs_new_eq:NN \_talk_saved_ifendpe: \if@endpe

```

(End of definition for _talk_action_only:N, _talk_action_only_end:N, and _talk_saved_ifendpe:.)

```
\l__talk_uncover_hidden_fp
```

Currently just an on-off, but that will change.

```

93 \NewTemplateType { hidden } { 0 }
94 \DeclareTemplateInterface { hidden } { talk } { 0 }
95   { opacity : real = 0 }
96 \DeclareTemplateCode { hidden } { talk } { 0 }
97   { opacity = \l__talk_uncover_hidden_fp }
98   { \_talk_opacity_begin:n { \l__talk_uncover_hidden_fp } }
99 \DeclareInstance { hidden } { std } { talk } { }

```

(End of definition for \l__talk_uncover_hidden_fp.)

__talk_action_uncover:N Use the template: we may need to extend that to deal with the end-of-template case
__talk_action_uncover_end:N later.

```

100 \cs_new_protected:Npn \__talk_action_uncover:N #1
101   {
102     \bool_if:NTF #1
103       { \__talk_opacity_begin:n { 1 } }
104       { \UseInstance { hidden } { std } }
105   }
106 \cs_new_protected:Npn \__talk_action_uncover_end:N #1
107   { \__talk_opacity_end: }

```

(End of definition for __talk_action_uncover:N and __talk_action_uncover_end:N.)

\invisible All generated automatically using the above implementations.

```

\uncover 108 \clist_map_inline:nn { invisible , uncover , visible }
\visible 109   {
110     \ExpandArgs { cne } \NewDocumentCommand {#1}
111       { > { \__talk_overlay_arg:n } D <> { all } +m }
112       {
113         \exp_not:c { __talk_action_ #1 :N } ##1
114         ##2
115         \exp_not:c { __talk_action_ #1 _end:N } ##1
116       }

```

(End of definition for \invisible, \uncover, and \visible. These functions are documented on page ??.)

invisibleenv (env.) And the environment versions.

```

uncoverenv (env.) 117 \ExpandArgs { nnee } \NewDocumentEnvironment { #1 env }
visibleenv (env.) 118   { > { \__talk_overlay_arg:n } D <> { all } }
119   { \exp_not:c { __talk_action_ #1 :N } ##1 }
120   { \exp_not:c { __talk_action_ #1 _end:N } ##1 }
121   }

```

\alert The \alert command requires a group to contain color, so is done separately even though it still uses basically the same mechanism.

```

122 \NewDocumentCommand \alert { > { \__talk_overlay_arg:n } D <> { all } +m }
123   {
124     \group_begin:
125       \__talk_action_alert:N #1
126       #2
127     \group_end:
128   }

```

(End of definition for \alert. This function is documented on page ??.)

alertenv (env.) As does the environment.

```

129 \NewDocumentEnvironment { alertenv } { > { \__talk_overlay_arg:n } D <> { all } }
130   { \__talk_action_alert:N #1 }
131   { }

```

`\only` This code needs to be done manually as for the command version the content must be entirely discarded. That can't work for the environment version, which has to deal with for example single items in a list (and so cannot be collected up verbatim and must use a box).

```

132 \NewDocumentCommand \only { D <> { all } +m }
133 {
134   \__talk_if_overlay:nT {#1}
135   {#2}
136 }

```

(End of definition for `\only`. This function is documented on page ??.)

`onlyenv (env.)` The environment version could be done above, but it is clearer to keep this code entirely separate from the rest.

```

137 \NewDocumentEnvironment { onlyenv } { > { \__talk_overlay_arg:n } D <> { all } }
138 { \__talk_action_only:N #1 }
139 { \__talk_action_only_end:N #1 }

```

```

\l__talk_saved_overlays_bool
\l__talk_saved_action_str
\l__talk_saved_actions_bool
140 \bool_new:N \l__talk_saved_overlays_bool
141 \str_new:N \l__talk_saved_action_str
142 \bool_new:N \l__talk_saved_actions_bool

```

(End of definition for `\l__talk_saved_overlays_bool`, `\l__talk_saved_action_str`, and `\l__talk_saved_actions_bool`.)

```

\l__talk_overlay_all_bool
143 \bool_new:N \l__talk_overlay_all_bool

```

(End of definition for `\l__talk_overlay_all_bool`.)

`actionenv (action)` As we need data on not just overlays but also actions at the end of the environment, this has to be done manually. To allow working with environments but also items, the code needs to save data for the end function. The group is needed for cases where we are not in a L^AT_EX environment group. When an `\onslide`/`\pause` is active, it takes priority: sorted by applying up-front. Actions can be skipped entirely if the overlay spec is simply `all`, as there will never be any spacing issues, *etc.*

```

```

(End of definition for \action and others. This function is documented on page ??.)

1.4 Non-action commands and environments

This section contains commands and environments that do *not* need to be made available as actions.

\alt Simple wrappers around the internal switch.

```

217 \NewDocumentCommand \alt { D <> { all } +m +m }
218 {
219   \__talk_if_overlay:nTF {#1}
220     {#2}
221     {#3}
222 }

```

(End of definition for \alt. This function is documented on page ??.)

\onslide Simply make transparent: this is done without grouping so we can work for example in
__talk_onslide:n tabular cells.

```

223 \NewDocumentCommand \onslide { D <> { all } }
224 {
225   \__talk_onslide:n {#1}
226   \ignorespaces
227 }
228 \cs_new_protected:Npn \__talk_onslide:n #1
229 {
230   \tl_use:N \g__talk_onslide_tl
231   \tl_gclear:N \g__talk_onslide_tl
232   \__talk_if_overlay:nF {#1}
233   {
234     \__talk_opacity_begin:n { 0 }
235     \tl_gput_right:Nn \g__talk_onslide_tl
236       { \__talk_opacity_end: }
237   }
238 }

```

(End of definition for \onslide and __talk_onslide:n. This function is documented on page ??.)

\g__talk_onslide_tl

```

239 \tl_new:N \g__talk_onslide_tl

```

(End of definition for \g__talk_onslide_tl.)

\temporal A tricky one: to separate the not-on-current-slide cases, the flag to continue is used.

```

240 \NewDocumentCommand \temporal { D <> { all } +m +m +m }
241 {
242   \__talk_if_overlay:nTF {#1}
243     {#3}
244     {
245       \bool_if:NTF \l__talk_decode_trailing_bool
246         {#4}
247         {#2}

```

```

248     }
249 }

```

(End of definition for \temporal. This function is documented on page ??.)

\pause A thin wrapper.

```

250 \NewDocumentCommand \pause { o }
251 {
252   \legacy_if:nF { measuring@ }
253   {
254     \IfNoValueTF {#1}
255     { \int_gincr:N \g__talk_pauses_int }
256     { \int_gset:Nn \g__talk_pauses_int {#1} }
257     \exp_args:Ne \__talk_onslide:n
258     { \int_eval:n { \g__talk_pauses_int + 1 } - }
259   }
260 }

```

(End of definition for \pause. This function is documented on page ??.)

1.5 Fixed-size areas

__talk_overprint_begin:n A common auxiliary for overprinting, which starts off much the same for both **overlayarea** and **overprint**.

```

261 \cs_new_protected:Npn \__talk_overprint_begin:n #1
262 {
263   \par
264   \vbox_set_to_wd:Nnw \l__talk_tmp_box {#1}
265   \raggedright
266   \ignorespaces
267 }

```

(End of definition for __talk_overprint_begin:n.)

overlayarea (env.) An initial approach: quite similar to a column.

```

268 \NewDocumentEnvironment { overlayarea } { m m }
269 { \__talk_overprint_begin:n {#1} }
270 {
271   \vbox_set_end:
272   \vbox_to_ht:nn {#2}
273   {
274     \box_use_drop:N \l__talk_tmp_box
275     \vfil
276   }
277   \par
278 }

```

\l__talk_overprint_int Track the overprints on a slide: as the slide forms a group, we do not need to worry about resetting.

```

279 \int_new:N \l__talk_overprint_int

```

(End of definition for \l__talk_overprint_int.)

`\__talk_frame_overprint:` To refer to the current overprint environment within the document: needed in the `.aux` so avoids using non-letters.

```

280 \cs_new:Npn \__talk_frame_overprint:
281 {
282   \int_to_Roman:n \g__talk_frame_int
283   \int_to_roman:n \l__talk_overprint_int
284 }

```

(End of definition for `\__talk_frame_overprint:.`)

`\__talk_overprint:(env.)` For overprinting, in contrast to `beamer` we use a two-pass approach to save the size at the end of the run: this means you can use `\only` for example in overprinting.

`\__talk_overprint_check_ht:n`

```

285 \NewDocumentEnvironment { overprint } { 0 { \textwidth } }
286 { \__talk_overprint_begin:n {#1} }
287 {
288   \vbox_set_end:
289   \int_incr:N \l__talk_overprint_int
290   \__talk_overprint_save_ht:
291   \cs_if_exist:cTF
292     { overprint@ \__talk_frame_overprint: }
293     {
294       \dim_compare:vNnTF
295         { overprint@ \__talk_frame_overprint: }
296         > { \box_ht:N \l__talk_tmp_box }
297         {
298           \vbox_to_ht:vn
299             { overprint@ \__talk_frame_overprint: }
300             {
301               \box_use_drop:N \l__talk_tmp_box
302               \vfil
303             }
304           }
305         { \box_use_drop:N \l__talk_tmp_box }
306       }
307     { \box_use_drop:N \l__talk_tmp_box }
308   \par
309 }

```

As there is no clear end-point for overprinting, we need to be careful to keep the current width separate from the saved one. The rest is then about saving to the `.aux` file and helping out the user.

```

310 \cs_new_protected:Npn \__talk_overprint_save_ht:
311 {
312   \tl_if_exist:cF { g__talk_overprint_ \__talk_frame_overprint: _tl }
313   {
314     \tl_new:c { g__talk_overprint_ \__talk_frame_overprint: _tl }
315     \tl_gset:cn { g__talk_overprint_ \__talk_frame_overprint: _tl }
316       { Opt }
317   }
318   \tl_gset:ce { g__talk_overprint_ \__talk_frame_overprint: _tl }
319   {
320     \dim_max:vn { g__talk_overprint_ \__talk_frame_overprint: _tl }
321     { \box_ht:N \l__talk_tmp_box }
322   }

```

```

323 \legacy_if:nT { @filesw }
324 {
325     \iow_now:Ne \@auxout
326     {
327         \gdef \exp_not:c { overprint@ \__talk_frame_overprint: }
328         {
329             \exp_not:v { g__talk_overprint_ \__talk_frame_overprint: _t1 }
330         }
331     }
332 }
333 \hook_gput_code:nne { enddocument / afterlastpage } { talk }
334 { \__talk_overprint_check_ht:n { \__talk_frame_overprint: } }
335 }
336 \cs_new_protected:Npn \__talk_overprint_check_ht:n #1
337 {
338     \bool_lazy_and:nnF
339     { \exp_not:N \cs_if_exist_p:c { overprint@ #1 } }
340     {
341         \dim_compare_p:vNv { overprint@ #1 } = { g__talk_overprint_ #1 _t1 }
342     }
343     {
344         \msg_warning:nn { talk } { overprint-ht }
345         \cs_gset_protected:Npn \__talk_overprint_check_ht:n ##1 { }
346     }
347 }
348 \msg_new:nnn { talk } { overprint-ht }
349 {
350     Overprint~area~height~has~changed:\\
351     rerun~LaTeX.
352 }

```

(End of definition for __talk_overprint_save_ht: and __talk_overprint_check_ht:n.)

1.6 Adding overlays to existing commands

\textbf Make the standard text commands overlay-aware. To keep the spacing unchanged when the command is not active, we use the same approach as the kernel does for inserting the right grouping.

\textit

\textmd

\textnormal 353 \tl_map_inline:nn

\textrm 354 {

\textsc 355 \textbf

\textsf 356 \textit

\textsl 357 \textmd

\texttt 358 \textnormal

\textup 359 \textrm

\emph 360 \textsc

\stdtextbf 361 \textsf

\stdtextit 362 \textsl

\stdtextmd 363 \texttt

\stdtextnormal 364 \textup

\stdtextrm 365 \emph

\stdtextsc 366 }

\stdtextsf 367 {

\stdtextsl 368 \ExpandArgs { c } \NewCommandCopy { std \cs_to_str:N #1 } #1

\stdtexttt

\stdtextup

\stdemph

__talk_textcmd_eqiv:n

```

369 \ExpandArgs { Nne } \RenewDocumentCommand #1
370 { D <> { all } +m }
371 {
372   \exp_not:N \__talk_if_overlay:nTF {##1}
373   { \exp_not:c { std \cs_to_str:N #1 } }
374   { \exp_not:N \__talk_textcmd_equiv:n }
375   {##2}
376 }
377 }
378 \cs_new_protected:Npn \__talk_textcmd_equiv:n #1
379 {
380   \mode_if_math:TF
381   { { \mbox {#1} } }
382   {
383     \mode_leave_vertical:
384     {#1}
385   }
386 }

```

(End of definition for \textbf and others. These functions are documented on page ??.)

`\includegraphics` Just wrap up the args and forward if appropriate. The star is #1 here as that matches the documented behavior of starred commands generally.

`\stdincludegraphics`

```

387 \RequirePackage { graphicx }
388 \NewCommandCopy \stdincludegraphics \includegraphics
389 \RenewDocumentCommand \includegraphics { s D <> { all } o o m }
390 {
391   \__talk_if_overlay:nT {#2}
392   {
393     \use:e
394     {
395       \exp_not:N \stdincludegraphics
396       \IfBooleanT #1 { * }
397       \IfNoValueF {#3} { [ \exp_not:n { {#3} } ] }
398       \IfNoValueF {#4} { [ \exp_not:n { {#4} } ] }
399     }
400     {#5}
401   }
402 }

```

(End of definition for \includegraphics and \stdincludegraphics. These functions are documented on page ??.)

`\label` Here, we can't wrap the existing command up as we need the space hack, so it has to be declared from scratch. There is also a non-standard overlay default. At present, no special tricks as seen in beamer.

`\__talk_label:n`

```

403 \RenewDocumentCommand \label { D <> { 1 } m }
404 {
405   \@bsphack
406   \__talk_if_overlay:nT {#1}
407   { \__talk_label:n {#2} }
408   \@esphack
409 }
410 \cs_new_protected:Npn \__talk_label:n #1

```

```

411 {
412   \begingroup
413     \UseHookWithArguments { label } { 1 } {#1}
414     \protected@write \@auxout { }
415     {
416       \string \newlabel {#1}
417       {
418         { \@currentlabel }
419         { \thepage }
420         { \@currentlabelname }
421         { \@currentHref }
422         { \@kernel@reserved@label@data }
423       }
424     }
425   \endgroup
426 }

```

(End of definition for \label and _talk_label:n. This function is documented on page ??.)

\std@label@in@display We also need to cover \label@in@display: a bit more awkward as this is a document command but not set up as such in amsmath. For the present, cross our fingers on this!

```

427 \cs_new_eq:NN \std@label@in@display \label@in@display
428 \RenewDocumentCommand \label@in@display { D <> { 1 } m }
429 {
430   \_talk_if_overlay:nT {#1}
431   { \std@label@in@display {#2} }
432 }

```

(End of definition for \std@label@in@display. This function is documented on page ??.)

1.7 Overlay patching of third-party environments

To allow opacity to apply to the entirety of constructed graphics, we need to apply a transparency group around the whole thing. We need to do that by saving the input in an Xform object, which then allows the group to be applied.

\g__talk_opacity_group_int Each use needs an Xform object, which at present we have to track as there are no anonymous ones.

```

433 \int_new:N \g__talk_opacity_group_int

```

(End of definition for \g__talk_opacity_group_int.)

_talk_opacity_group_begin: A general mechanism to collect up an environment in a box, which we can then use as the source for an Xform object.

_talk_opacity_group_end:

```

434 \cs_new_protected:Npn \_talk_opacity_group_begin:
435 { \begin { lrbox } \l__talk_tmp_box }
436 \cs_new_protected:Npn \_talk_opacity_group_end:
437 {
438   \end { lrbox }
439   \mode_leave_vertical:
440   \int_gincr:N \g__talk_opacity_group_int
441   \exp_args:Ne \pdfxform_new:nnn
442     { talk.opacity \int_use:N \g__talk_opacity_group_int }
443     { /Group << /S /Transparency /K ~ false /I ~ false >> }

```

```

444     { \usebox \l__talk_tmp_box }
445     \exp_args:Ne \pdfxform_use:n
446     { talk.opacity \int_use:N \g__talk_opacity_group_int }
447   }

```

(End of definition for __talk_opacity_group_begin: and __talk_opacity_group_end:.)

At present, we only add code onto the main top-level functions. This is only applied in LuaT_EX due to restrictions on Xform structures in pdfT_EX. Here, we apply the collection code to the commands not the environment forms to deal with “direct” usage.

```

448 \sys_if_engine_luatex:T
449 {
450   \AddToHook { cmd / pspicture / before } { \__talk_opacity_group_begin: }
451   \AddToHook { cmd / endpspicture / after } { \__talk_opacity_group_end: }
452 }
453 \</class>

```

Part VIII

ltx-talk-required – “Required” definitions

1 ltx-talk-required implementation

Start the DocStrip guards.

```
1 <*class>
    Identify the internal prefix.
2 <@@=talk>
```

Here we collect up things that are more-or-less required to create a useful class but are not defined by the L^AT_EX kernel for historical reasons. They are therefore largely copies from `article.cls` and contain “classical” definitions so that they follow the expectations of third-party code.

`\today` This is the definition as done in the standard classes.

```
3 \cs_new_nopar:Npn \today
4 {
5     \ifcase \month \or
6         January \or
7         February \or
8         March \or
9         April \or
10        May \or
11        June \or
12        July \or
13        August \or
14        September \or
15        October \or
16        November \or
17        December
18    \fi
19    \space
20    \number \day ,
21    \space
22    \number \year
23 }
```

(End of definition for \today. This function is documented on page ??.)

1.1 Standard design settings

```
24 \setcounter { tocdepth } { 3 }
25 \setlength \arraycolsep { 5pt }
26 \setlength \tabcolsep { 6pt }
27 \setlength \arrayrulewidth { 0.4pt }
28 \setlength \doublerulesep { 2pt }
29 \setlength \tabbingsep { \labelsep }
30 \skip \@mpfootins = \skip \footins
```

```

31 \setlength \fboxsep { 3pt }
32 \setlength \fboxrule { 0.4pt }

```

1.2 List support

```

33 \setlength \labelsep { 0.5em }
34 \cs_new:Npn \labelenumi { \theenumi . }
35 \cs_new:Npn \labelenumii { ( \theenumii ) }
36 \cs_new:Npn \labelenumiii { \theenumiii . }
37 \cs_new:Npn \labelenumiv { \theenumiv . }
38 \cs_new:Npn \labelitemi { \labelitemfont \textbullet }
39 \cs_new:Npn \labelitemii { \labelitemfont \bfseries \textendash }
40 \cs_new:Npn \labelitemiii { \labelitemfont \textasteriskcentered }
41 \cs_new:Npn \labelitemiv { \labelitemfont \textperiodcentered }
42 \cs_new:Npn \labelitemfont { \normalfont }

43 \setlength \leftmargini { 2em }
44 \setlength \leftmarginii { 2em }
45 \setlength \leftmarginiii { 2em }
46 \setlength \labelsep { 0.5em }
47 \setlength \labelwidth { \leftmargini }
48 \addtolength \labelwidth { -\labelsep }

98     } ,
99   subtitle .tl_set:N =
100     \l__talk_sec_subtitle_tl ,
101   toc .tl_set:N =
102     \l__talk_sec_toc_tl
103 }
104 \tl_new:N \l__talk_sec_label_tl

```

(End of definition for `\l__talk_sec_bookmark_tl` and others.)

Here, we need full L^AT_EX counters, so create them using the appropriate mechanism: that also means we can sort out counter dependency and the appearance (using the same setup as in `article`). As (subsub)section numbers never increment inside frames, we remove these counters from the general tracker.

```

\section
\subsection
\subsubsection
\thesection
\thesubsection
\thesubsubsection
105 \newcounter { section }
106 \newcounter { subsection } [ section ]
107 \newcounter { subsubsection } [ subsection ]
108 \seq_gremove_all:Nn \g__talk_cnt_reset_seq { section }
109 \seq_gremove_all:Nn \g__talk_cnt_reset_seq { subsection }
110 \seq_gremove_all:Nn \g__talk_cnt_reset_seq { subsubsection }
111 \cs_gset:Npn \thesection { \@arabic \c@section }
112 \cs_gset:Npn \thesubsection { \thesection . \@arabic \c@subsection }
113 \cs_gset:Npn \thesubsubsection { \thesubsection . \@arabic \c@subsubsection }

```

(End of definition for `\section` and others. These functions are documented on page ??.)

`\section` The sectioning commands all have essentially the same form: we therefore create using a
`\subsection` generator with the necessary conditionals in place. As we do not typeset sections at this
`\subsubsection` stage, the code is quite different from `article`. This also means that the bookmark links
`\insertsection` need to point forward to the next slide: if that doesn't appear, the bookmarks will be
`\insertsubsection` out. Using the general scratch sequence here should be OK: it really is a one-off setting.
`\insertsubsubsection` We need a sequence to allow indexed mapping to avoid any extra setup for the depth
`\__talk_head_section:Nnn` value.
`\__talk_head_subsubsection:Nnn`
`\_talk_head_subsubsection:Nnn`

```

197         \int_compare:nNnF {#3} > { \value { secnumdepth } }
198         { \protect \numberline { \use:c { the #2 } } }
199         #4
200     }
201 }

```

(End of definition for `\__talk_head_marks:nnnnn` and `\__talk_head_marks_aux:Nnn`.)

`\appendixmarker` At present, the best way to deal with the TOC for the appendix is to set a marker: this
`\contentsline` will likely be generalized once we add support for parts.
`\_talk_saved_contentline:nnnn`

```

202 \NewDocumentCommand \appendixmarker { }
203 {
204   \bool_if:NTF \l__talk_appendix_bool
205     { \cs_gset_eq:NN \contentsline \_talk_saved_contentline:nnnn }
206     { \cs_gset_eq:NN \contentsline \use_none:nnnn }
207 }
208 \cs_new_eq:NN \_talk_saved_contentline:nnnn \use_none:nnnn
209 \cs_gset_eq:NN \_talk_saved_contentline:nnnn \contentsline

```

(End of definition for `\appendixmarker`, `\contentsline`, and `\_talk_saved_contentline:nnnn`. These functions are documented on page ??.)

`talk/sec/title` The argument is one of section, subsection or subsubsection.
`\_talk_head_tag:nn`

```

210 \NewTaggingSocket { talk / sec / title } { 1 }
211 \NewTaggingSocketPlug { talk / sec / title } { default }
212 {
213   \exp_args:Ne \_talk_head_tag:nn
214     { \text_purify:v { l__talk_ #1 _ t1 } } { #1 }
215 }
216 \cs_new_protected:Npn \_talk_head_tag:nn #1#2
217 {
218   \tag_struct_begin:e
219   {
220     tag          =
221       \UseStructureName { sec / \use:c { toplevel@ #2 } / title } ,
222     title        = { #1 } ,
223     actualtext   = { #1 } ,
224   }
225   \tag_struct_end:
226 }
227 \AssignTaggingSocketPlug { talk / sec / title } { default }

```

(End of definition for `talk/sec/title` and `\_talk_head_tag:nn`. This function is documented on page ??.)

1.3 Table of contents

`\@starttoc` The standard kernel implementation here deliberately overwrites the file as soon as it's
`\@starttoc@aux__talknn` read. That's no good for us as the table of contents can be read multiple times. So we
 modify the code: we start from the tagging-aware version (this may need to be revisited).
 We retain the L^AT_EX 2_ε code as much as possible.

```

228 \cs_gset_protected:Npn \@starttoc #1
229 {
230   \begingroup
231   \makeatletter
232   \bool_if:NTF \g__talk_frame_tag_bool
233     { \@starttoc@aux@__nn }
234     { \use_ii:nn }
235     { #1 } { \input { \jobname . #1 } }
236   \legacy_if:nT { @filesw }
237   {
238     \AddToHook { enddocument / afterlastpage }

```

```

239         {
240             \expandafter \newwrite \csname tf@ #1 \endcsname
241             \immediate \openout \csname tf@ #1 \endcsname \jobname .#1 \relax
242         }
243     }
244     \@nobreakfalse
245     \endgroup
246 }
247 \cs_new_protected:Npn \@starttoc@aux@nn #1#2
248 {
249     \UseTaggingSocket { toc / starttoc / before } {#1}
250     #2
251     \UseTaggingSocket { toc / starttoc / after } {#1}
252 }

```

(End of definition for \@starttoc and \@starttoc@aux__talknn. This function is documented on page ??.)

\tableofcontents For the present simply print the output.

```

253 \NewDocumentCommand \tableofcontents { 0 { } }
254 {
255     \group_begin:
256     \@starttoc { toc }
257     \group_end:
258 }

```

(End of definition for \tableofcontents. This function is documented on page ??.)

\l@section Initial hard-coded versions to be templated once we have some other effects also working.

\l@subsection We may need to look at this “higher up” as we will need to know the section numbers.

\l@subsubsection 259 \cs_new_protected:Npn \l@section #1#2

__talk_toc_aux:nnnn 260 { __talk_toc_aux:nnnn { 1 } { \bfseries \color { structure } } {#1} {#2} }

__talk_toc_dest:n 261 \cs_new_protected:Npn \l@subsection #1#2

__talk_toc_dest:w 262 {

__talk_toc_level:nnnn 263 __talk_toc_aux:nnnn

264 { 2 }

265 {

266 \skip_set:Nn \leftskip { 2em }

267 \color_ensure_current:

268 }

269 {#1} {#2}

270 }

271 \cs_new_protected:Npn \l@subsubsection #1#2

272 {

273 __talk_toc_aux:nnnn

274 { 3 }

275 {

276 \skip_set:Nn \leftskip { 4em }

277 \color_ensure_current:

278 \footnotesize

279 }

280 {#1} {#2}

281 }

282 \cs_new_protected:Npn __talk_toc_aux:nnnn #1#2#3#4

378     \__talk_action_end:
379 }

```

1.5 Lists

`\item` Again, add the additional argument: here, we have to do a little gymnastics. The test for an overlay has to come after the standard item definition: in a list, items have to *close* the structure before them first, so if we test too early, we'd end up covering then uncovering straight away! Once it is stable, we should revisit here to see if it would be sensible to use the hook mechanism.

```

380 \AddToHook { begindocument / before }
381 {
382   \NewCommandCopy \stditem \item
383   \RenewDocumentCommand \item { d <> o }
384   {
385     \IfNoValueTF {#2}
386     { \stditem }
387     { \stditem [ {#2} ] }
388     \IfNoValueTF {#1}
389     {
390       \exp_after:wN \__talk_item_parse_spec:w
391       \l__talk_action_spec_str < all > \q_stop
392     }
393     { \__talk_item_parse_spec:n {#1} }
394   }
395 }

```

Parsing the spec is a separate function here as there are a couple of routes to get here. At present we only have a `false` branch, but for spacing we likely will need to add something to the `true` branch too. The odd stuff with `\currentgrouplevel` here is needed so we only close the item at the correct nesting, allowing for the group that gets added.

```

396 \cs_new_protected:Npn \__talk_item_parse_spec:w #1 < #2 > #3 \q_stop
397 { \__talk_item_parse_spec:n {#2} }
398 \cs_new_protected:Npn \__talk_item_parse_spec:n #1

(End of definition for `\item`, `\__talk_item_parse_spec:w`, and `\__talk_item_parse_spec:n`. This function is documented on page ??.)

```
\l__talk_list_end_tl
```

```

416 \tl_new:N \l__talk_list_end_tl

```

(End of definition for \l__talk_list_end_tl.)

__block_inter_item: Before L^AT_EX 2026-6-01, there was no hook pair for surrounding items, so so patching had to be done. The extra complexity here is that there is no test for hook existence, and the hook was not in the first dev release of 2026-06-01. So there is some low-level testing needed: \l__block_topsepadd_skip is used as a marker.

```

417 \cs_if_exist:NTF \l__block_topsepadd_skip
418 {
419   \cs_gset_protected:Npn \__block_inter_item:
420   {
421     \legacy_if:nT { @inlabel }
422     { \indent \par }
423     \mode_if_horizontal:T
424     {
425       \__block_skip_remove_last:
426       \__block_skip_remove_last:
427       \par
428     }
429     \l__talk_list_end_tl
430     \__kernel_list_item_end:
431     \__kernel_list_item_begin:
432     \addpenalty \@itempenalty
433     \addvspace \itemsep
434   }

```

A rather long block done by expansion to avoid duplication in a patch.

```

482 }
483 }
484 }

```

(End of definition for `\__block_inter_item:`, `\BlockEnvEnd`, and `\endblockenv`. These functions are documented on page ??.)

The branch where `\l__block_topsepadd_skip` is not defined, which means we have a sufficiently new kernel to use the hooks. When we revise for the updated kernel, we could consider simply adding the code directly to the hook rather than using a token list, although that would mean hook operations each time there is an overlay.

```

485 {
486     \AddToHook { item / after }
487     { \l__talk_list_end_tl }
488 }

```

`itemize (env.)` Allow for the classical beamer syntax: currently two versions but that will only last until the 2026-06-01 release of L^AT_EX is out.

`enumerate (env.)`

`description (env.)`

```

489 \AddToHook { begindocument / before }
490 {
491     \clist_map_inline:nn { itemize , enumerate , description }
492     {
493         \RenewDocumentEnvironment {#1} { = { action-spec } !o }
494         { \SimpleBlockEnv {#1} {##1} }
495         { \BlockEnvEnd }
496     }
497 }

```

And add the structural color to item labels.

```

498 \AddToHook { begindocument / before }
499 {
500     \EditInstance { item } { basic }
501     { label-format = \color { structure } #1 }
502     \EditInstance { item } { description }
503     { label-format = \normalfont \bfseries \color { structure } #1 }
504 }

```

`\l__talk_action_spec_str` Add an overlay key to the `block` template. Placed here, it applies *before* the `\item` starts, so we do not have to redefine the latter to do actions up-front. This also means it can apply to whatever we want it to within a block.

```
505 \keys_define:nn { template / block / std }
506   { action-spec .str_set:N = \l__talk_action_spec_str }
```

(End of definition for `\l__talk_action_spec_str`.)

1.6 Theorems, etc.

`\newtheorem` We need to extend the creation of theorems by adding the overlay argument. This means
`\stdnewtheorem` grabbing all of the arguments up-front, then having to pass them on to different versions of `\newtheorem` depending on what else has been loaded.

```
507 \NewCommandCopy \stdnewtheorem \newtheorem
508 \RenewDocumentCommand \newtheorem { s m o m o }
509   {
510     \use:e
511     {
512       \exp_not:N \stdnewtheorem
513       \IfBooleanT #1 { * }
514       { \exp_not:n {#2} }
515       \IfNoValueF {#3} { \exp_not:n { [ {#3} ] } }
516       { \exp_not:n {#4} }
517       \IfNoValueF {#5} { \exp_not:n { [ {#5} ] } }
518     }
519     \NewEnvironmentCopy { std #2 } {#2}
520     \RenewDocumentEnvironment {#2} { D <> { all } o }
521     {
522       \__talk_action_begin:n {##1}
523       \IfNoValueTF {##2}
524       { \begin { std #2 } }
525       { \begin { std #2 } [ {##2} ] }
526       \ignorespaces
527     }
528     {
529       \end { std #2 }
530       \__talk_action_end:
531     }
532   }
```

(End of definition for `\newtheorem` and `\stdnewtheorem`. These functions are documented on page ??.)

1.7 Bibliographies

`thebibliography` The article definition but without the section part.

```
533 \NewDocumentEnvironment { thebibliography } { m }
534   {
535     \list { \@biblabel { \@arabic \c@enumiv } }
536     {
537       \settowidth \labelwidth { \@biblabel {#1} }
538       \leftmargin \labelwidth
539       \advance \leftmargin \labelsep
540       \@openbib@code
```

```

541     \usecounter { enumiv }
542     \let \p@enumiv \@empty
543     \renewcommand \theenumiv { \@arabic \c@enumiv }
544 }
545 \sloppy
546 \clubpenalty 4000
547 \@clubpenalty \clubpenalty
548 \widowpenalty 4000
549 \sfcode `\. \@m
550 }
551 {
552   \def \@noitemerr
553     { \@latex@warning { Empty~`thebibliography'~environment } }
554   \endlist
555 }
556 \cs_set_eq:NN \@openbib@code \@empty

```

(End of definition for thebibliography. This function is documented on page ??.)

1.8 Supplementary material

`\l__talk_appendix_bool`

```

557 \bool_new:N \l__talk_appendix_bool

```

(End of definition for \l__talk_appendix_bool.)

`\appendix` Set up the global boolean and the TOC control.

```

558 \NewDocumentCommand \appendix { D <> { all } }
559 {
560   \__talk_if_overlay:nT {#1}
561   { \bool_set_true:N \l__talk_appendix_bool }
562   \addtocontents { toc } { \appendixmarker }
563   \cs_gset_eq:NN \contentsline \use_none:nnnn
564 }

```

(End of definition for \appendix. This function is documented on page ??.)

```

565 </class>

```

Part X

ltx-talk-title – Title pages

1 ltx-talk-title implementation

Start the DocStrip guards.

```
1 <*class>
    Identify the internal prefix.
2 <@@=talk>
```

```
\@author We create a set of keys and variables in one go. Following the classical kernel approach,
\@date    all of the underlying storage is global. The short values will always be set in the following
\@institute code so can be used automatically anywhere we might want them.
\@subtitle 3 \clist_map_inline:nn
\@title    4 { author , date , institute , subtitle , title }
\@shortauthor 5 {
\@shortdate 6 \keys_define:nn { talk / metadata }
\@shortinstitute 7 {
\@shortsubtitle 8 #1 .tl_gset:c = @ #1 ,
\@shorttitle 9 short- #1 .tl_gset:c = @short #1
10 }
11 }
```

Allow empty values for author and title.

```
12 \tl_gclear:N \@author
13 \tl_gclear:N \@title
```

As the date has a standard value, that has to be propagated.

```
14 \tl_gset_eq:NN \@shortdate \@date
```

(End of definition for \@author and others. These variables are documented on page ??.)

```
\author Slightly repetitive but as we need to handle the tagging aspects, this is easier than using
\date    a loop. The main aim is to add the short metadata concept. Notice that keys are set
\title   before the main data storage in case someone set the value as a key as well as a mandatory
        argument.
```

```
15 \RenewDocumentCommand \author { = { short-author } 0 { {#2} } m }
16 {
17   \keys_set:nn { talk / metadata } {#1}
18   \tl_gset:Nn \@author {#2}
19   \tl_gset_eq:NN \g__tag_title_author_tl \@author
20   \keys_set_known:nn { hyp } {#1}
21 }
22 \RenewDocumentCommand \date { = { short-date } 0 { {#2} } m }
23 {
24   \keys_set:nn { talk / metadata } {#1}
25   \tl_gset:Nn \@date {#2}
26 }
27 \RenewDocumentCommand \title { = { short-title } 0 { {#2} } m }
28 {
29   \keys_set:nn { talk / metadata } {#1}
```

```

30 \tl_gset:Nn \@title {#2}
31 \tl_gset_eq:NN \g__tag_title_title_tl \@title
32 \keys_set_known:nn { hyp } {#1}
33 }

```

(End of definition for \author, \date, and \title. These functions are documented on page ??.)

\institute Simple storage at present: unlike some of the kernel data, there is not a lot to do here.

```

\subtitle
34 \NewDocumentCommand \institute { = { short-institute } 0 { {#2} } m }
35 {
36   \keys_set:nn { talk / metadata } {#1}
37   \tl_gset:Nn \@institute {#2}
38 }
39 \NewDocumentCommand \subtitle { = { short-subtitle } 0 { {#2} } m }
40 {
41   \keys_set:nn { talk / metadata } {#1}
42   \tl_gset:Nn \@subtitle {#2}
43 }

```

(End of definition for \institute and \subtitle. These functions are documented on page ??.)

\l__talk_titlelem_after_skip \l__talk_titlelem_before_skip \l__talk_titlelem_color_tl \l__talk_titlelem_font_tl \l__talk_titlelem_tag_begin_tl \l__talk_titlelem_tag_end_tl As the various elements of the titlepage share certain characteristics, we use a single template and split them as instances.

```

44 \NewTemplateType { titlepage-element } { 1 }
45 \DeclareTemplateInterface { titlepage-element } { talk } { 1 }
46 {
47   after-skip : length = 0em ,
